1364.0.15.003 - Modellers' Database, Sep 2008

Previous ISSUE Released at 11:30 AM (CANBERRA TIME) 21/01/2009

Summary

About this Release

The Modellers' Database consists of 410 quarterly times series constructed from the NIF and TRYM econometric models. They are useful to economists, econometricians, financial analysts and students. The database covers national accounts, banking and investment, price indexes, interest rates, world data, population and labour statistics and wage and tax rates. Some of the time series are published elsewhere by ABS while others are specifically constructed for the TRYM and NIF models. For most series the data span is between 45 and 50 years.

Explanatory Notes

Time Series Spreadsheet (I-Note) - Time Series Spreadsheet

Modellers Database (Cat. no. 1364.0.15.003)

This quarter release of The **Modellers Database** (cat.no. 1364.0.15.003) will give our clients a fresh look of all the time series spreadsheets resulting from the conversion of the current Lotus 1-2-3 .wks spreadsheets to Excel .xls format.

The Modellers database contains 126 NIF series (Tables 1 - 17) and 284 TRYM series (Tables 18 to 37).

The new product provides a range of benefits for time series clients, the most significant of which is the use of a unique identifier for each series. This allows clients to reliably extract series using the unique identifier, rather than column and rows based macros. Other features of the Excel format include:

- consistent and complete series metadata is provided for every series displayed
- a readily recognised file format (Excel) that will 'auto launch' in most business IT environments

The new format files can be opened, read and manipulated using Excel 5.0/95 (or equivalent), however, some features will not be available unless you have Excel 97 (or better).
